DETAILED ACTION

Restriction Requirement

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 1-11, and 30-36 are, drawn to a tunable optical filter, classified in class 359, subclass 578.
- II. Claims 12-29, drawn to a spectrum analyzer, classified in class 356, subclass 453.

The inventions are distinct, each from the other because:

Inventions I and II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because any polarization sensitive tunable filter would meet the claimed limitation in claim 12. The subcombination has separate utility such as ant tunable filter means.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, have acquired a separate status in the art because of their recognized divergent subject matter, and the search required for Group I is not required for Group II, restriction
